

# Title: Do our chickens have a healthy weight and how fast do they grow?

**Aim:** Our aim is to see if the Chickens are healthy and growing at the right weight.

**Hypothesis:** We predict that Rex(brown) is the heaviest and grow the fastest and Lola (ginger) is the lightest and grow the slowest.

## Equipment:

- Chickens
- Pen
- Measuring scale
- Paper or computer
- Excel
- Calculator

## Method:

1. Gether all the chickens together ready to be weighted.

2. Weigh each chicken every week from

March 2020- Oct 2020.

3. Plot the weights using excel chart.

**Conclusion:** As per our prediction, Rex is the heaviest (the oldest) and Lola is the lightest /smallest size(youngest) in the chicken group. Because of the data from the chart, we think that they have a healthy weight because they increase their weight by time.
